3000-CA

Since 1981, Turnstile Security Systems has been a manufacturer of quality pedestrian control products. Our goal is to provide our customers will the highest quality products with unsurpassed customer service.

Turnstile Security full height turnstiles are used to permit unsupervised exit and entry for a variety of applications. Our products will conveniently integrate with any access control systems and are available in manual and electric control versions.

With the 3000-CA you have a turnstile that will effectively protect areas that demand full security. The transparent arms and clear side panels achieve an open and inviting entry point that will complement any location. Our product's attention to detail and modern design will pleasantly welcome your visitors and employees while maintaining a high level of security.

This product is also available in a tandem design 3000-CAT that combines the functions of two single turnstiles into one unit, reducing the required footprint.
